Screw

Bracket

IMPORTANT!

Screws for mounting the shelf to the wall are not included. Examine your wall to determine what type of screws and plugs you need to buy and where you can drill. The diameter of the screw must not exceed 6 mm.

1.

Measure where on the wall you need to drill to get the shelf where you want it. Keep in mind that the brackets should be mounted at a small distance from the edge of the shelf.

2.

Drill, plug and finally screw the brackets in place (A).

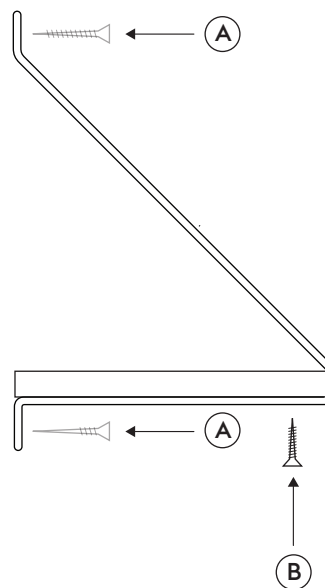

3.

Put the shelf in place and secure it with the screw (B). All done!

TIP!

A spirit level or equivalent will help you get the shelf straight.
